

PS Plate Strainer

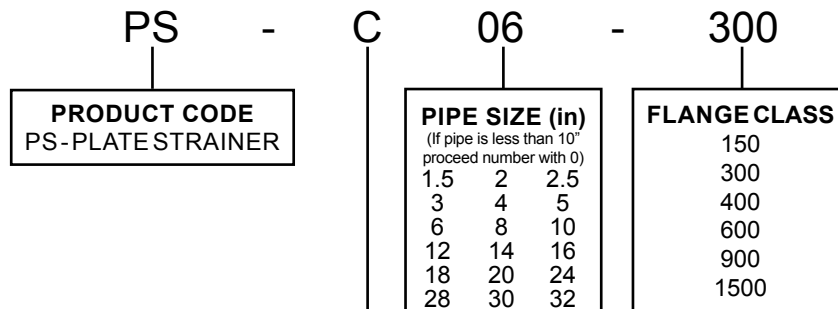

The 3L Filters™ PS Series plate strainers are used to protect fluid and gas handling equipment by removing debris during the start-up of a system. These can easily be installed or placed between large flange faces without modifying the surrounding pipe work and are easily removed.

Standard Features

- available in 316 stainless steel or carbon steel
- phonographic finish
- strainer has 11-gauge perforated material with 1/8" holes on staggered centers
- easy reference part numbers located on the handle
- custom build available upon request
